What is construction & demolition (C&D) debris?

C&D debris is generated during the construction, renovation and demolition of buildings, roads and bridges. This debris – which comprises a significant amount (30 to 40 percent) of the waste disposed of in South Carolina – includes material such as:

- **Concrete, bricks, rock and other masonry material;**
- **Wood and pallets;**
- **Metal;**
- **Plaster and drywall;**
- **Plumbing fixtures and piping;**
- **Insulation;**
- **Shingles and other roof coverings;**
- **Reclaimed hardened asphalt pavement;**
- **Glass windows, doors and furniture;**
- **Cardboard;** and
- **Landscape waste.**

Proper Management of C&D Debris

DISPOSAL

C&D debris must be disposed of in Class 2 (C&D) or Class 3 (municipal solid waste) landfills. For information on the nearest Class 2 or Class 3 landfill, visit www.scdhec.gov/cd and click on LANDFILLS.

RECYCLING

C&D debris can be recycled. The S.C. Department of Health and Environmental Control (DHEC) offers a list of companies in South Carolina that recycle C&D debris at www.scdhec.gov/cd and click on MARKETS.

Builders and contractors can help divert C&D material from disposal through best management practices such as source reduction, salvaging, recycling and reusing as well as buying recycled material and products. The U.S. Environmental Protection Agency provides detailed information on these practices. For more information, please visit www.scdhec.gov/cd and click on BEST MANAGEMENT PRACTICES.

ATTENTION LANDOWNERS!

Landowners should **NEVER** use C&D debris – including concrete – on their property (e.g., to fill a ravine or gully) without checking with DHEC for permitting requirements.

If improperly managed, landowners may be subject to a fine.

Visit www.scdhec.gov/HomeAndEnvironment/DHECLocations for a list of regional DHEC offices.
